Introduction

The **Movie Booking System** is a simple Java application developed to make movie ticket booking easy and convenient. The system allows users to view available movies and their ticket prices, select a movie, choose a showtime, and select a seat. It also calculates discounts for evening shows, adds GST, and generates a final movie bill. The project uses basic Java concepts such as **methods, conditional statements, user input using Scanner, and calculations**. It is designed as a beginner-friendly project to understand how Java programming can be used to create a simple real-world application

ABSTRACT ABOUT CINEMA SEAT BOOKING SYSTEM

The **Movie Booking System** is a simple Java-based application designed to make movie ticket booking easy and user-friendly. The system displays available movies with their ticket prices and allows the user to select a movie, choose a showtime, and select a seat. It also provides a discount for evening shows and calculates GST before generating the final bill. The program uses Java concepts such as **methods, conditional statements, Scanner input, and basic calculations**. It also checks for invalid movie, showtime, and seat selections. The system finally displays the movie details, showtime, discount, GST, total amount, and seat number after successful booking.

proposed

movie name

The movie names used in the Movie Booking System are:

- **Spiderman Brand New Day** – ₹250
- **Avengers Doomsday** – ₹350
- **Avengers Secret Wars** – ₹460
- **Salaar 2** – ₹170

show timing

The Movie Booking System provides **two showtime options**:

- **Morning Show**
- **Evening Show**

Seat Selection

The system allows the user to **select a seat number from 1 to 40**. The program checks whether the entered seat number is valid. If the seat is between **1 and 40**, the booking is confirmed; otherwise, it displays **"Invalid seat."**

Bill

The system generates a **movie bill** after the booking is confirmed. The bill includes:

- **Movie Name**
- **Showtime**
- **Base Price**
- **Discount** – 10% for evening shows
- **GST – 1.4%**
- **Total Paid**
- **Seat Number**
- **Thank You message**

Existing

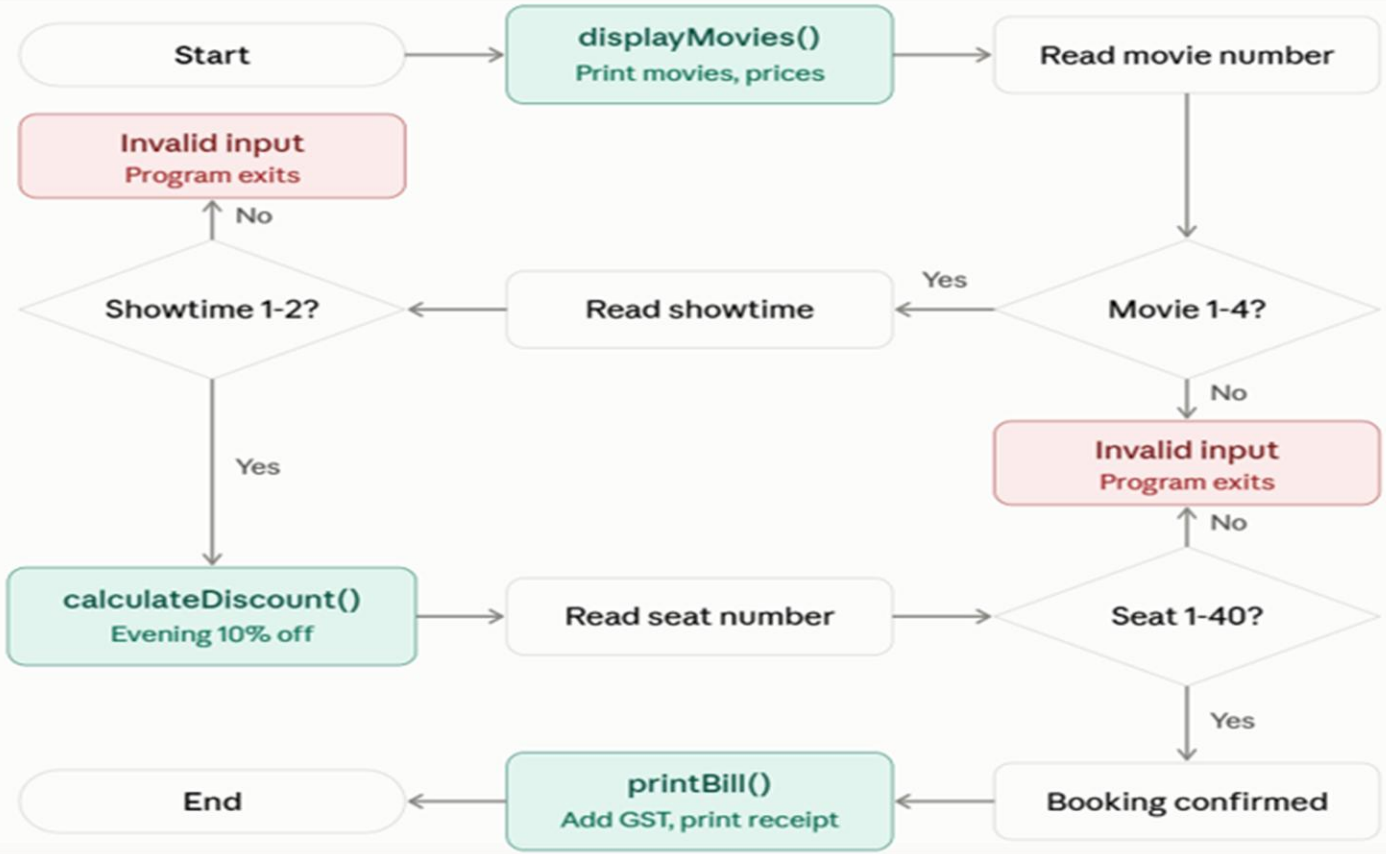

Race Conditions (Double Booking**):** When two users try to book the exact same seat simultaneously

Lack of Temporary Seat Locking: Most basic systems directly mark a seat as BOOKED. Modern systems require a temporary hold state

Payment Gateway Dependency: Hardcoding a single payment mechanism rather than abstracting payment logic via Java interfaces

Flow chart

Start
displayMovies()
Print movies, prices
Read movie number
Invalid input
Program exits
No
Showtime 1-2?
Read showtime
Yes
Movie 1-4?
No
Yes
Invalid input
Program exits
No
calculateDiscount()
Evening 10% off
Read seat number
Seat 1-40?
Yes
End
printBill()
Add GST, print receipt
Booking confirmed

CO-ATTINAMENTS

CO-1

Using of scanner class, datatypes like int and string, we used athematic operators and logical operators formate specifiers.

CO-2

Using of if–else loop for seat selection and for loop for maximum of seats and also used switch cases for show time and movie selection.

CO-3

Using of methods concept condition like with arguments and with return type.
